19.3. epic Communications shall endeavour to provide the customer with a connection speed that reflects the Fixed Services which is being subscribed to. The connection speed is the speed at which data is transferred between the customer's computer and epic Communications core network. The connection speed will always be greater than the download speed, which is the speed at which data is transferred from the internet to the user's computer, since download speed is dependent on internet or network congestion, and the speed of websites that the user connects to on the internet, among others. fairly amongst users. Broadband services continue to be offered as they have always been, on a best effort basis.

19.5. Network management procedures and tools that are consistent with industry practice are utilized to ensure that the integrity of the epic network is maintained. In cases when the epic Communications network is at risk of being congested, epic Communications reserves the right to take whatever action it sees fit in order to ensure that the quality of service is not impacted. These actions may result in customers experiencing varied service and performance levels.

19.6. epic Communications reviews individual subscriber upload and download usage and behaviour relative to average customer use of the network for each product. In the case of congestion caused by abusive use of the service or activities which impair other customers from accessing the network, epic Communications may intervene by notifying the customer of the abusive behaviour. Where traffic is repeatedly abusive epic Communications reserves the right to stop provision of the Fixed Services.

19.7. The technology used to provide the Fixed Services is in epic Communications sole discretion.
